

## **Universal 4-port isolated RS422/RS485 serial PCI adapter**

These new adapters support all form factors and environments : SP, LP MD1, PCI 3.3V, PCI 5V & PCI-X.

The automatic RS485 line turn-around function contributes to the simplicity of the product installation, it works up to 1 Mbps and is totally independent of the communication protocol.

They accept both 2 and 4 wires RS422/485 connection, polarization and terminating resistors can be activated by switches.

Signals are protected against electrostatic discharges up to 15KV and are also optically isolated up to 2500V.

Connections are done through 5-point screw-in terminals connectors.

Products feature the latest technologies : 128 bytes FIFO, built-in PCI interface in order to reduce the host CPU overhead.

Products are powered from an AC power source (+85VAC to 264 VAC / 47-440 Hz) and are delivered with Windows & Linux OS drivers.

Its robustness and its great adaptability makes it a really universal product capable to feet in all the needs of the industry.
